

**Sidergas S.p.A.** is a welding wire manufacturing company well known worldwide for having devised and introduced to the market its revolutionary technology Weldpoint® for twist-free winding welding wires into patented square packs. Moreover, it ranks among the very few world manufacturers who can effectively twist-free wind into bulk packs larger diameter wires, like those employed in submerged arc welding applications.

Since 2002, the company has developed a Quality Management System that meets the requirements of the UNI EN ISO 9001 Standard with the following field of application:

**Wire's production, distribution, and after-sale technical assistance, as well as related accessories for welding GMAW, SAW, and GTAW. Designing and manufacturing innovative packaging of the welding wire.**

The Sidergas' Management is constantly working on actively and effectively maintaining the Quality Management System by providing adequate resources and regularly assessing the results.

This System is considered an optimal supportive tool for:

- **Fostering an increase in business competitiveness** as well as constantly improving the company performances;
- **Guaranteeing the respect of laws, regulations, and technical normative applicable to the field of work**, in terms of certification of the products, safety of the workers and of the working environment, and secure data management;
- **Achieving the Customers' complete satisfaction** and maintaining its position of leadership both on the national and international market;
- **Promoting the commitment and sensitization of the whole staff** for the implementation of the principles expressed by the hereby Quality Policy and for everyone's commitment to satisfy both the expressed and implicit demands of the Customers.

Sidergas Management is committed to leading the organisation towards the following goals:

- **Carefully and constantly evaluating the market requirements and its developments**, in order to minimize and, wherever possible, resolve in a satisfactory manner all the technical and commercial issues that might arise, in order to continuously and fully meet the Customers' needs and expectations, to their complete satisfaction;
- **Ensuring the continuous improvement and updating of the equipment, machines, and systems** used by the quality management in all stages of the production process, in order to improve the products quality, the company's productivity, and its competitiveness on the world markets;
- **Promoting the discussion and collaboration with the suppliers**, in order to rapidly solve the problems that might arise and prevent their re-occurrence, with the scope of a strategic mutual convenience;
- **Constantly promoting the staff training and updating** with regards to the internal and external quality as well as the customers' satisfaction, in order to improve the professional skills of the human resources at all levels.
